CAREER OBJECTIVE

Final-year B.Tech student specializing in Data Science with strong foundations in Python, Data Structures, Algorithms, OOPs, DBMS, Machine Learning, Software Engineering and Full Stack Development. Experienced in building AI-powered and scalable web applications using Python, React.js, Node.js, SQL, and modern development frameworks. Passionate about solving real-world problems through intelligent software solutions and seeking opportunities to contribute technical, analytical, and problem-solving skills in Software Engineering and AI-driven product development roles.

SKILLS SUMMARY

- **Programming Languages :** Python, JAVA, C, SQL
- **Concepts :** Data Structures & Algorithms, Machine Learning, OOPs, DBMS,
- **Libraries & Frameworks :** TensorFlow, NumPy, Scikit-learn, React.js, Flask, Pandas, Matplotlib, Seaborn
- **Tools :** Git, GitHub, Power BI , Tableau
- **Web Technologies :** HTML, CSS, React.js

PROJECTS

MedEquip360 – AI-Powered Medical Equipment Supply & Service Management Platform | Tech used : React.js, Node.js, Express.js, REST APIs, Tailwind CSS, Vercel, Render

- Developed and deployed a full-stack healthcare equipment management platform for inventory tracking, hospital order management, servicer requests, warranty monitoring, and preventive maintenance scheduling.
- Designed RESTful APIs and integrated them with a responsive React frontend to support complete CRUD operations across multiple healthcare workflows.
- Implemented analytics dashboards and operational monitoring features to streamline equipment lifecycle management and improve healthcare service coordination.
- Successfully deployed the frontend on Vercel and backend on Render, enabling real-time access to the platform.

Multi-Modal Medical Image Analysis & Diagnostic Platform | Tech used : Python, PyTorch, Computer Vision, Deep Learning, Transfer Learning, OpenCV, FastAPI, Docker

- Designed and developed a multi-modal Computer Vision platform for automated analysis of Brain MRI, Bone X-ray, and Chest X-ray images within a unified diagnostic framework.
- Implemented EfficientNet-B0 for multi-class brain tumor detection, ConvNeXt-Tiny for fracture classification, and a CLIP + FAISS retrieval pipeline for chest X-ray diagnostic report generation. Implemented real-time feedback system to provide form correction prompts, improving user form accuracy by an estimated 85%.
- Achieved ~90% accuracy across diagnostic modules using transfer learning, data augmentation, threshold tuning, and structured preprocessing pipelines.

SignVerse AI – Two-Way Sign Language Recognition & Communication System | Tech used : Python, TensorFlow/Keras, OpenCV, MediaPipe, Flask, React

- Developed a full-stack AI-powered sign language communication platform enabling Sign → Text, Sign → Speech, and Text → Sign representation
- Built a custom CNN (1.3M parameters) for ASL alphabet recognition trained on ~87,000 images, achieving ~90% validation accuracy.
- Implemented a MediaPipe-based hand landmark extraction pipeline for word-level sequence recognition using TensorFlow models.

INTERNSHIPS

AI/ML Engineer Intern, Educatumy, Hyderabad

Dec 2025 – Mar 2026

- Served as a core technical contributor in a 4-member team, leading the development and implementation of multiple client and PhD-level projects.
- Developed and trained deep learning models for image classification and AI-based applications using TensorFlow and PyTorch.
- Translated client requirements into scalable technical solutions, ensuring functionality, accuracy, and timely project delivery.
- Collaborated with team members to integrate development outputs with structured technical documentation and final project deliverables.

EDUCATION

Malla Reddy Engineering College

Bachelor of Technology – Data Science ; CGPA: 8.99

Medchal ,Telangana

June 2023 – Present

Sri Chaitanya Junior College

Intermediate - MPC ; percentage : 98%

Ranga Reddy ,Telangana

January 2021 – March 2023

CERTIFICATES

- Advanced Software Engineering Job Simulation – Forage
- Introduction to Technology Apprenticeship – Accenture
- Microsoft Azure AI Fundamentals – Microsoft
- Data Visualization with Power BI – GreatLearning

ACHIEVEMENTS

- Secured 83rd Rank in Unstop Weekly Coding Challenge (Challenge 19) among national participants.
- Participated in Smart India Hackathon (SIH) and MSME innovation events, collaborating on technology-driven project solutions.
- Organized and coordinated technical events and student activities in college, managing event planning, team coordination, and participant engagement.
